

Double tank mounted return line filter with filter element according to DIN 24550

Type 10TDN0040 ... 1000; 10TD2000; 2500

RE 51454

Edition: 2019-11

Replaced: 05.15

H8062_d

- Size according to DIN 24550: 0040 to 1000
- additional sizes: 2000, 2500
- Component series 1X
- Nominal pressure 10 bar [145 psi]
- Connection up to 3"
- Operating temperature -10 °C to +100 °C
[14 °F to 212 °F]

Features

The tank mounted return line filters are designed for installation on fluid tanks. Their function is to separate solid materials from fluids.

They distinguish themselves by the following:

- Filters for tank mounting, switchable
- Special highly efficient filter materials
- Filtration of very fine particles and high dirt holding capacity across a broad pressure differential range
- High collapse resistance of the filter elements
- Optionally equipped with mechanical optical maintenance indicator with memory function
- Optional equipment with various electrical switching elements, modular design
- By default, the filters are equipped with a bypass valve integrated in the filter housing
- Optional measuring port

Electronic switching element for maintenance indicators

If an electronic switching element with signal suppression up to 30°C [86 °F] is used (WE-2SPSU-M12X1, **R928028411**), it must be ensured that the aluminum version of the mechanical-optical maintenance indicator is used. In the filter type key, these maintenance indicators are referred to as „V0,8“, „V1,5“ or „V2,2“.

In this connection, also refer to the chapter „Maintenance indicator“.

The temperature-controlled signal processing does not work with mechanical-optical maintenance indicators made of polyamide, „P2,2“.

Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

Function, section

The switchable tank mounted return line filter is provided in the return line for direct attachment onto the tank of a hydraulic or lubrication system. It can also be used as filling or bypass filter. The filter basically consists of filter head (1) and switch-over fitting (2), filter bowl (3), cover (4), filter element (5) as well as a bypass valve (6), by default.

Optionally, the filter is equipped with mechanical optical maintenance indicator with memory function (7). For integration of the maintenance indicator into an electric circuit, the mechanical optical maintenance indicator may be amended by an electronic switching element. To this end, the electronic switching element (8) must be attached to the mechanical optical maintenance indicator (7) and held by means of a locking ring. The electronic switching elements are connected via a mating connector or a cable connection. The electronic switching element must be ordered separately. For every filter housing, a switching element is required.

Depending on the filter size, further additional functions are available – e.g. a breathing filter, surge protection (only for NG0040 - 0100) or outlet pipes in different lengths – in this connection, also refer to the chapter „Accessories“.

During operation, the hydraulic fluid reaches the filter housing via the inlet; here, it flows through the filter element from the outside to the inside and is cleaned according to the filter rating. The dirt particles filtered out settle in the filter element. Via the outlet, the filtered hydraulic fluid enters the tank. In case of contamination, the necessary filter element change-out is displayed by the relevant maintenance indicator. Within the course of this exchange, you should also exchange the breathing filter element (only with NG NG0040-0100). To this end, the system is manually switched to the clean filter element by means of the switch-over fitting. Permanent flow is guaranteed during the switching process.

Type 10TDN0400-0630

WARNING

If the maintenance indicator is not observed while the element is exchanged, the bypass valve will open if the differential pressure increases. In this way, part of the flow reaches the clean side of the filter without being filtered. Thus, effective filtration is no longer guaranteed.

Assignment: response pressure of the maintenance indicator / cracking pressure of the bypass valve		bar [psi]		Response pressure of the maintenance indicator		Cracking pressure of the bypass valve	
				without maintenance indicator		3.5 ± 0.35 [50.8 ± 5.1]	
				with pressure gauge			
				V0.8 ± 0.15 [11.6 ± 2.2]			
				V1.5 ± 0.2 [21.8 ± 2.9]			
				V2.2 ± 0.3 [31.9 ± 4.4]			
		P2.2 +0.45/-0.25 [31.9(+6.4/-3.6)]					
Filtration direction		From the outside to the inside					

¹⁾ The service life of the components is e.g. influenced by:

- The individual load frequency of the application
- The actually occurring pressure increase rate

The technical specifications apply complying with the specified performance limits. Extended operational resistance/load change upon request.

Technical data

(For applications outside these values, please consult us!)

Further information on the characteristic values and filter media is available in data sheet 51548.

Compatibility with permitted hydraulic fluids

Hydraulic fluid		Classification	Suitable sealing materials	Standards
Mineral oil		HLP	NBR	DIN 51524
Bio-degradable	► Insoluble in water	HETG	NBR	VDMA 24568
		HEES	FKM	
	► Soluble in water	HEPG	FKM	VDMA 24568
Flame-resistant	► Water-free	HFDU, HFDR	FKM	VDMA 24317
		HFAS	NBR	DIN 24320
	► Containing water	HFAE	NBR	
		HFC	NBR	VDMA 24317

Important information on hydraulic fluids:

- For further information and data on the use of other hydraulic fluids, please refer to data sheet 90220 or contact us!
- Flame-resistant – containing water: Due to possible chemical reactions with materials or surface coatings of machine and system components, the service life with these hydraulic fluids may be less than expected. Filter materials made of

filter paper (cellulose) must not be used, filter elements with glass fiber material (Pure Power PWR... or wire mesh G) must be used instead.

- Bio-degradable: If filter materials made of filter paper are used, the filter life may be shorter than expected due to material incompatibility and swelling.

Electronic switching element with round plug-in connection M12x1, 4-pins

Electronic switching element with rectangular connector EN 175301-803

- 1 Mechanical optical maintenance indicator;
max. tightening torque $M_{A \max} = 50 \text{ Nm}$ [36.88 lb-ft]
tightening torque for back pressure indicator in PA6.6
 $M_{A \max} = 35 \text{ Nm}$ [25.82 lb-ft]
- 2 Switching element with locking ring for electrical maintenance
indicator (rotatable by 360°); plug-in connection M12x1, 4-pole
- 3 Switching element with locking ring for electrical maintenance
indicator (rotatable by 360°); plug-in connection EN175301-803
- 4 Housing with three LEDs: 24 V =
green: stand-by
yellow: switching point 75 %
red: switching point 100 %
- 5 Optical indicator, self-holding - receiptable
- 6 Locking ring DIN 471-16x1, material no. **R900003923**
- 7 Name plate

Notices:

If an electronic switching element with signal suppression up to 30 °C [86 °F] is used (WE-2SPSU-M12X1, **R928028411**), it must be ensured that the aluminum version of the mechanical-optical maintenance indicator is used. In the filter type key, these maintenance indicators are referred to as „V2,2“, „V1,5“ or „V0,8“.

In this connection, also refer to the chapter „Spare parts and Accessories“.

The temperature-controlled signal processing does not work with mechanical-optical maintenance indicators made of polyamide.

Assembly, commissioning, maintenance

Assembly

The max. operating pressure of the system must not exceed the max. adm. operating pressure of the filter (see name plate).

Notice:

If a pressure gauge is used, the maximum admissible operating pressure is reduced to 6 bar [87 psi].
For frame sizes 1000 - 2500 without adapter plate, a height compensation of 50 mm must be taken into account.

Before the assembly, the hole pattern of the tank must be compared to the dimensions from the chapter „Dimensions“.

We urgently recommend leading drain pipes as of a length of approx. 400 mm in a bracket in order to avoid oscillations caused by the fluid flow in the tank. It is moreover to be ensured that in case of maintenance works, the filter bowl and the outlet pipe are pulled out of the filter head together.

During assembly of the filter (see also chapter „Tightening torques“), the flow direction (direction arrows) and the required servicing height of the filter element (see chapter „Dimensions“) are to be considered. With frame sizes 1000 - 2500, the lifting eyes can be used as assembly aid. Perfect functioning is only guaranteed in the installation position filter bowl vertically downwards and ON the tank. The maintenance indicator must be arranged in a well visible way.

Remove the plastic plugs in the filter inlet and outlet. Ensure that the system is assembled without tension stress.

The optional electronic maintenance indicator is connected via the electronic switching element with 1 or 2 switching points, which is attached to the mechanical optical maintenance indicator and held in place by means of the locking ring.

Commissioning

Commission the system.

Switch the filter into the operating position; to do so, switch the switching lever to one of the two end positions. The filter side that is currently flown-through can be seen from the switching symbol at the switch-over.

Notice:

There is no bleeding provided at the filter.
Caution: Risk of burning!
When working on the filter, e.g. when replacing filter elements and cleaning, pay attention to possibly hot operating fluid. The safety instructions of the machine end-user are to be observed.

Maintenance

- ▶ If at operating temperature, the red indicator pin extends out of the mechanical optical maintenance indicator and/or if the electronic switching element opens / closes the circuit, the filter element is contaminated and needs to be replaced and cleaned respectively.
- ▶ The material number of the corresponding replacement filter element is indicated on the name plate of the complete filter assembly. It must comply with the material number on the filter element.
- ▶ Switch the switching lever to the opposite end position in order to switch to the clean filter side. Observe the switching symbol on the switching lever and/or the switch-over.
- ▶ Screw off the filter cover and/or loosen the screws and remove the filter over upwards.

Notice:

Note that with lower ratings, it may take slightly longer to discharge the residual oil. If there is still residual oil in the filter bowl, the fluid has to be collected in a separate tank.

- ▶ Remove the filter element together with the filter bowl. From frame size 0160, the filter bowls are equipped with removal brackets.
- ▶ Remove the filter element from the spigot in the filter bowl by rotating it slightly.
- ▶ Clean the filter components, if necessary.
- ▶ Check the seals at filter cover and filter bowl for damage and replace them, if necessary. For suitable seal kits refer to chapter „Spare parts“.
- ▶ Filter elements made of wire mesh can be cleaned. For detailed cleaning instructions refer to data sheet „Filter elements“
- ▶ Install the new or cleaned filter element on the spigot again by slightly rotating it.
- ▶ The filter is to be assembled in reverse order.
- ▶ The torque specifications („Tightening torques“ chapter) are to be observed.
- ▶ During the filter element change-out, the breathing filter element should be exchanged manually (only with NG 0040-0100)

Assembly, commissioning, maintenance**⚠ WARNING!**

- | | |
|--|--|
| <ul style="list-style-type: none"> ▶ Assembly and disassembly only with depressurized system! For the filter element change-out refer to „Maintenance“. ▶ Filter is under pressure! ▶ Only remove the filter cover when it is depressurized! ▶ Do not operate the switching lever during the filter element change-out. ▶ Do not exchange the maintenance indicator while the filter is under pressure! | <ul style="list-style-type: none"> ▶ If the flow direction is not considered during the assembly, the filter element will be destroyed. Particles will get into the system and damage downstream components. ▶ When disassembling the filter, it must be ensured that the system is depressurized. |
|--|--|

👉 Notices:

- | | |
|--|--|
| <ul style="list-style-type: none"> ▶ Work on the filter may only be carried out by trained specialists. ▶ Functioning and safety are only guaranteed if original Bosch Rexroth filter elements and spare parts are used. | <ul style="list-style-type: none"> ▶ Warranty expires in the event that the delivered item is changed by the ordering party or third parties or improperly mounted, installed, maintained, repaired, used or exposed to environmental conditions that do not comply with the installation conditions. |

Installation plate screw (hexagon socket head cap screw)	–					M10 x 20		M10 x 25		
Quantity	–					8				
Recommended property class of screw	–					8.8				
Tightening torque with $\mu_{\text{total}} = 0.14$ Nm [lb-ft]	–					21 ± 10 % [16 ± 10 %]				

Filter cover

Series 10TD...	N0040	N0063	N0100	N0160	N0250	N0400	N0630	N1000	2000	2500
Filter cover screw	–			M10		M12				
Quantity	–			4						
Recommended property class of screw	–			8.8						
Tightening torque with μ _{total} = 0.14	Nm [lb-ft]	manually to the stop 30 ± 10 % ¹⁾ [22 ± 10 %]		21 ± 10 % [16 ± 10 %]		37 ± 10 % [27 ± 10 %]				

Maintenance indicator

Series 10TD...	N0040	N0063	N0100	N0160	N0250	N0400	N0630	N1000	2000	2500
Maintenance indicator, mechanical optical, aluminum, V... Nm [lb-ft]	max. 50 [37]									
Maintenance indicator, mechanical optical, PA, P2,2 Nm [lb-ft]	35 ± 3 [26 ± 3 %]									
Cubic connector screw switching element EN-175301-803 Nm [lb-ft]	M3/0.5 [0.4]									

¹⁾ Re-tighten using an open-end wrench (SW41), if necessary

Directives and standardization

Product validation

Rexroth filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
Δp (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Rexroth industrial filters and Rexroth filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2000.

Classification according to the Pressure Equipment

Directive

DirectiveThe return flow filters for hydraulic applications according to 51454 are pressure holding equipment according to article 2, section 5 of the Pressure Equipment Directive 2014/68/EU (PED).

However, due to the safety requirements fulfilled in article 4, section 3, hydraulic filters are exempt from the PED if they are not classified higher than category I.

For classification, fluids from the chapter „Compatibility with permitted hydraulic fluids“ have been taken into consideration. The intended use is only admissible with fluids of group 2 and within the specified limitations of use (see chapter „Technical data“). Therefore, these filters are not provided with the CE mark.

Use in potentially explosive areas according to directive 2014/34/EU (ATEX)

The tank mounted return line filters according to 51454 are not equipment or components in the sense of directive 2014/34/EU and are not provided with the CE mark. It has been proven with the ignition risk analysis that these return line filters do not have own ignition sources according to DIN EN ISO 80079-36:2016.

The electronic maintenance indicators with one switching point:

WE-1SP-M12x1 R928028409

WE-1SP-EN175301-803 R928036318

are, according to DIN EN 60079-11:2012, simple, electronic operating equipment without their own voltage source.

Notice:

According to DIN EN 60079-14:2014, this simple, electronic operating equipment may be used in intrinsically safe electric circuits (Ex ib) in systems without marking and certification.

Maintenance indicators with EC type examination certificate upon request.

The tank mounted return line filters and the electronic maintenance indicators described here can be used for the following potentially explosive areas:

	Zone suitability	
	1	2
Gas	1	2
Dust	21	22

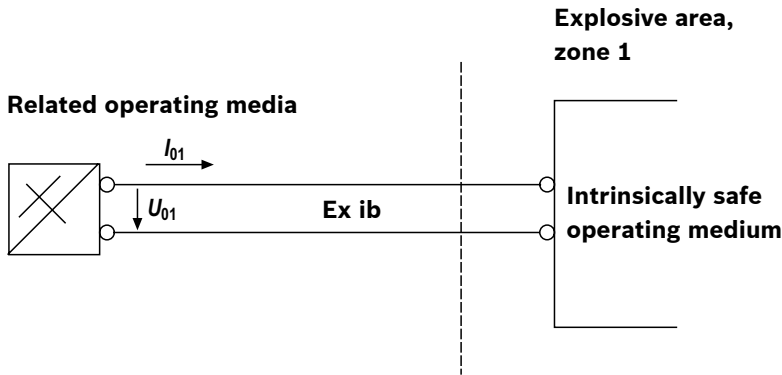

Complete filter with mech./opt. maintenance indicator				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex h II c T6...T1 Gb	Ex h II C T70°C...T450°C Db
Minimum conductivity of the medium	pS/m	min	300	
Dust accumulation		max	–	0.5 mm [0.019 inch]

Guidelines and standards

Electronic switching element in the intrinsically safe electric circuit				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex II 2G Ex ib IIB T4 Gb	Ex II 2D Ex ib IIIC T100°C Db
Perm. intrinsically safe electric circuit			Ex ib IIC, Ex ic IIC	Ex ib IIIC
Technical data			Values only for intrinsically safe electric circuit	
Switching voltage	Ui	max	150 V AC/DC	
Switching current	Ii	max	1.0 A	
Switching power	Pi	max	1.3 W T4 T _{max} 40°C	750 mW T _{max} 40 °C
		max	1.0 W T4 T _{max} 80 °C	550 mW T _{max} 100 °C
Maximum surface temperature ¹⁾		max	–	100 °C
Inner capacity		Ci	neglectable	
Inner inductivity		Li	neglectable	
Dust accumulation		max	–	0.5 mm [0.019 inch]

¹⁾ The temperature depends on the temperature of the medium in the filter and must not exceed the value specified here.

Possible circuit according to DIN EN 60079-14

⚠ WARNING!

- ▶ Explosion hazard due to high temperature!
The filter surface temperature depends on the temperature of the medium in the hydraulic circuit and must not exceed the value specified here. Measures are to be taken so that in the potentially explosive area, the max. admissible ignition temperature is not exceeded.
 - ▶ When using the tank mounted return line filters according to 51454 in potentially explosive areas,
- appropriate equipotential bonding has to be ensured. The filter is preferably to be earthed via the mounting screws. It has to be noted in this connection that paintings and oxidic protective layers are not electrically conductive.

 - ▶ During filter element change-out, the packaging material is to be removed from the replacement element outside the potentially explosive area

👉 Notices:

- ▶ Maintenance to be conducted only by specialists, as per the instruction by the machine end-user according to DIRECTIVE 1999/92/EG Annex II, section 1.1
- ▶ Functional and safety warranty only applicable when using genuine Rexroth spare parts

Environment and recycling

- ▶ The used filter element has to be disposed of according to the country-specific legal regulations for environmental protection.
- ▶ After the service life of the filter, the filter components can be recycled according to the applicable country-specific legal regulations for environmental protection.

Intended use

The filters according to RE 51454 consist of a filter housing, filter element and maintenance indicator, which serve as components in the sense of the EC Machinery Directive 2006/42/EC in hydraulic machinery for the separation of dirt particles.

The filters are used under the following boundary conditions and limits:

- ▶ Only in hydraulic systems with fluids of group 2, according to Pressure Equipment Directive 2014/68/EU
- ▶ Only according to the application and environmental conditions in the chapter „Technical data“
- ▶ Only in compliance with the specified performance limits in the section „Technical data“; extended operational durability/load cycles on request
- ▶ Only with hydraulic fluids and the intended seals according to the section „Compatibility with hydraulic fluids“
- ▶ Use in potentially explosive atmospheres according to the chapter „Guidelines and standards“
- ▶ The notes regarding the operating modes according to the section „Assembly, commissioning, maintenance“ must be observed
- ▶ Compliance with application and environmental conditions according to the technical data
- ▶ Compliance with the specified performance limits
- ▶ Use in the original condition, without damage
- ▶ Maintenance work, such as the replacement of seals, filter elements and optical indicators with original Bosch Rexroth spare parts, is admissible. Repair by the customer, particularly at pressurized components, is inadmissible.
- ▶ The filters are intended exclusively for professional use and not for private use.

Improper use

Any use deviating from the intended use is improper and thus not admissible.

Improper use of the filters includes:

- ▶ Incorrect storage
- ▶ Incorrect transport
- ▶ Lack of cleanliness during storage, assembly and operation
- ▶ Incorrect installation
- ▶ Use of inappropriate/non-admissible hydraulic fluids
- ▶ Exceedance of the specified maximum pressures and load cycles
- ▶ Operation outside the approved temperature range
- ▶ Installation and operation in an inadmissible device group or category
- ▶ Operation outside the specified limits for the operating voltage, see the section „Technical data“

Bosch Rexroth AG does not assume any liability for damage caused by improper use. The user assumes all risks involved with improper use.
